Additional proprietary features supported by the integrated circuit. Please list below. (eg. Chip selection with random number, reduce read range, ...)

^A In ISO/IEC 18000-6:2004 Am1: 2006 the password only protects the reserved memory bank. The cover coding does not help in protecting the consumer privacy as it only applies for protecting the password.

^B For ISO/IEC 18000-6:2004 Am1: 2006, ISO/IEC 18000-63:2012 the TID may not be unique as this is not a requirement in the standard, however, most product vendors provide serialisation.
